SUMMARY

Full Stack Developer with production ownership of scalable web applications built on React.js, Node.js, MongoDB, and AWS cloud infrastructure. Experienced in architecting AI powered automation systems using LLM integration, designing and optimizing RESTful API backends, and owning end to end deployment pipelines including cloud migrations, CI/CD setup, and Linux server administration. Delivered measurable engineering impact: 50% reduction in manual processing time through AI powered automation, 40% improvement in page load performance through CDN and caching strategies, and 99.9% production uptime through proactive system reliability practices. Collaborative team contributor with hands on experience in code review workflows, Git best practices, and agile development environments.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend:	React.js, Redux Toolkit, Context API, Tailwind CSS, Material UI, Responsive Design
Backend:	Node.js, Express.js, RESTful API Design, Scalable Architecture, Asynchronous Processing
Database & Cache:	MongoDB, Redis, Mongoose, Schema Design, Query Optimization
AI & LLM:	OpenAI API, Prompt Engineering, LLM Automation
Auth & Security:	JWT, Role Based Access Control (RBAC), OAuth, API Security
DevOps & Cloud:	Git, GitHub Actions, CI/CD Pipelines, PM2, Nginx, Linux Server Administration Production Monitoring, AWS (EC2, S3, Route 53), Cloudflare CDN, Cloudflare Tunnel, Vercel
Tools:	Git PR Workflows, Branch Management, OpenAPI, Multer

EXPERIENCE

Full Stack Developer Intern

Jun 2025 – Present

Avulanture

Calicut, India

- Owned end to end architecture and delivery of a production full stack travel agency platform designing the user facing interface (Tailwind CSS) and admin dashboard (Material UI) with JWT authentication and role based access control, currently serving live production traffic.(alziyaratravel.com)
- Designed and optimized 20+ RESTful API endpoints with MongoDB schema design, owning backend data persistence strategy and improving average query response time by 35%.
- Engineered and executed a full backend infrastructure migration from AWS (EC2, S3, Route 53) to a self configured Linux server diagnosing dynamic public IP constraints and resolving them by independently implementing a Cloudflare Tunnel, maintaining zero user facing downtime throughout.
- Established CI/CD deployment pipeline using GitHub Actions, reducing deployment cycle time by 60% and achieving 40% page load improvement through Cloudflare CDN integration and React code splitting strategies.
- Optimized client side state architecture with Redux Toolkit and memoization techniques, eliminating 30% unnecessary re renders and cutting Time to Interactive from 3.2s to 2.1s on the user portal.

Frontend Developer (Freelance)

Sep 2025

Tradiify

Remote

- Translated a pixel perfect Figma design into a production HTML/Tailwind CSS Website (tradiify.com) with 5+ responsive breakpoints, achieving 98 Lighthouse performance score and full mobile responsiveness.
- Collaborated with senior developers in a team environment owning feature branches, raising pull requests, resolving merge conflicts, and enforcing code quality standards through structured Git review workflows across 20+ PRs.

PROJECTS

AI-Powered RFP Management System — React · Node.js · Express.js · MongoDB · OpenAI API 2025

- Architected a full stack procurement automation platform that converts natural language business requirements into structured RFP schemas via GPT-4 eliminating manual data entry and cutting vendor evaluation time from 4 hours to 2 hours (50% reduction). (GitHub)
- Built an email dispatch system using Nodemailer that sends structured RFPs to multiple vendors simultaneously; vendor responses are ingested into the platform where LLM extraction processes 50+ structured data points per response at 85% accuracy — eliminating manual data entry from procurement workflows.
- Designed a vendor comparison and recommendation dashboard in React that surfaces AI generated scores, summaries, and procurement rationale across 30+ vendor responses, enabling data driven selection decisions.

AI-Powered CV Parser & Persona Generator — Node.js · Express.js · MongoDB · OpenAI API 2025

- Designed and built a full stack AI recruitment tool with a structured prompt engineering approach that parses CVs across 25+ file formats into role specific candidate personas at 90% extraction accuracy, engineered to handle concurrent upload processing at scale. (GitHub)
- Architected 12 RESTful API endpoints with layered Express.js middleware covering JWT authentication, file upload handling (Multer), request validation, and centralized error management ensuring backend reliability during high volume processing.
- Engineered a multi persona generation system that produces distinct candidate profiles for different job roles from a single CV upload, backed by structured MongoDB schema design with timestamp tracking.

Travel Agency Information System — MERN Stack · Redis · PM2 · Cloudflare Tunnel 2025

- Deployed a dual environment MERN application (user portal + admin dashboard) on a self configured Linux server with PM2 cluster mode and Cloudflare Tunnel, maintaining 99.9% production uptime with automated process recovery. (Live)
- Integrated Redis caching (85% hit rate) reducing server response time from 450ms to 180ms while sustaining 1,000+ concurrent connections.

Tradiify – Financial Education Website — HTML5 · Tailwind CSS 2025 (Freelance)

- Built a responsive, SEO optimized Website from Figma design with 98 Lighthouse score and 100% cross device layout consistency across 5+ breakpoints, delivered through senior developer collaboration. (Live)

PROFESSIONAL DEVELOPMENT

Self Directed Full Stack Engineering 2024 – Present

- Completed 1,000+ hours of hands on MERN stack development through project based learning and official documentation, shipping 4+ production applications with live user traffic and 99.9% uptime through full deployment ownership.
- Gained applied expertise in Linux server administration, AWS cloud infrastructure (EC2, S3, Route 53), Cloudflare CDN/Tunnel, CI/CD pipeline configuration, and production monitoring using PM2 through direct deployment ownership rather than tutorials.
- Currently advancing proficiency in Next.js, TypeScript, PostgreSQL, and Docker to align with full stack engineering standards in product driven and SaaS engineering teams.

KEY ACHIEVEMENTS

- **AI Automation Impact:** Reduced vendor evaluation time by 50% by engineering an LLM powered RFP system with structured email parsing, AI generated scoring, and procurement recommendation workflows.
- **Performance Engineering:** Achieved 40% page load reduction (3.2s → 1.9s) on a live production platform through Cloudflare CDN, Redis caching (85% hit rate), and React bundle optimization.
- **Infrastructure Ownership:** Independently designed and executed a zero downtime AWS to Linux server migration with Cloudflare Tunnel, maintaining 99.9% uptime and cutting infrastructure costs.
- **Production Reliability:** Shipped and maintained 4+ production applications end to end owning architecture decisions, deployment pipelines, debugging, and performance monitoring across each system.
